

New Service Consumer Obligations

Following our on-site discussion today, the consumer is required to complete 3 steps to proceed towards construction of the new line extension.

1. A quote will be created based on the onsite meeting and will be mailed out to you (usually takes between 1- 2 weeks). You will have to pay the “Contribution in Aid” and any deposits noted on the quote. Please make checks payable to **“BARC”** or **“BARC Electric Cooperative”**.
2. An easement will be written up by BARC and will be mailed to you in your packet of information. You will need to have the easement signed and notarized by all property owners on the deed and the original document mailed back to **BARC**. If your construction requires easements from adjoining property owners, an easement will also be created for the adjoining property owners and mailed along with your easement.
3. Based on your application and load sheet, a meter base will be provided by BARC after the on-site meeting. A location for the meter base will be chosen after a consultation between the consumer and the on-site staking engineers. This meter will need to be installed along with any disconnects (if any are required). After the meter base is installed, an electrical inspection is required to be completed by your local jurisdiction and a copy will need to be sent to BARC. ***Either the consumer or electrical contractor should inform the inspector and he will send BARC a copy of said inspection.***

After these three steps have been completed and processed, BARC will schedule for construction. You will be put in contact with our construction supervisor, and the project schedule can be coordinated between BARC and any consumer associated contractors involved in the project.
